- **Submission:** Upload your completed assignment as a single PDF file to the designated link of **Google Forms**.
- **File Naming Format:** Your file should be renamed as **yourname_rollno_SRE Assignment 1**

Question 1

Imagine you are developing a new mobile banking app. Identify the following requirements for this project based on the categories that we have studied in class.

- **User requirement**
- **System requirement**
- **Business requirement**
- **Functional requirement**
- **Non Functional Requirements**
- **Product requirement**
- **Project requirement**

Question 2

An airline is developing a self-service check-in booth to reduce staff costs by 25 percent. Identify **three external quality attributes** and **two internal quality attributes** from the provided lists that would be most critical for this booth's success. Justify why each is essential for this specific scenario. Stake holder also want to make sure that it must ensure that passenger passport data is never leaked.

a) Which **External Quality Attribute** relates to handling the surge?
b) Which **External Quality Attribute** relates to protecting passenger data?
c) Explain how **Usability** affects the airline's goal of reducing staff costs."

Questions 3

The developers were so confident in their knowledge of home security that they skipped interviewing actual homeowners. After the app launched, users complained that the **"Emergency"** button was too small to hit quickly.

a) Name the reason for **"bad requirements"** that occurred because the developers thought they already understood what the users needed.
b) If a developer decided to add a **"Weather Forecast"** widget to the security dashboard just because they thought it was a "cool feature," even though it wasn't requested, what is this called?

========== **Good Luck** ==========
